

NAME

curl_formfree - free a previously build multipart/formdata HTTP POST chain

SYNOPSIS

```
#include <curl/curl.h>
```

```
void curl_formfree(struct curl_httppost *form);
```

DESCRIPTION

curl_formfree() is used to clean up data previously built/appended with *curl_formadd(3)*. This must be called when the data has been used, which typically means after *curl_easy_perform(3)* has been called.

The pointer to free is the same pointer you passed to the *CURLOPT_HTTPPOST(3)* option, which is the *firstitem* pointer from the *curl_formadd(3)* invoke(s).

form is the pointer as returned from a previous call to *curl_formadd(3)* and may be NULL.

RETURN VALUE

None

SEE ALSO
